The major topics which will be covered under the SAP SCM course are Concept and Objectives, Systems and Architectures, Supply Chain Projects. Every topic will be covered in most practical way with examples.

SAP SCM is an important part of the group of SAP customized solutions, boasts of the distinction of being one of the most impactful SCM software applications in the market. It is specifically designed to maintain companies relationships with clients, customer, suppliers; distribution, streamline the processes of planning inventory and transportation; and effectively control and manage the entire supply chain to address customer expectations and perform to the optimized levels.

The Advanced Planning & Optimization (APO) product group is part of Supply Chain Management (SCM) but also pre-dates the SCM solution. When SAP's customers required more functionality beyond APO but which naturally fit with that product set, they created this broader category of SCM. However, because so many customers had worked just with APO previously, the name has really stuck around. Hence the official relationship could be seen as:
APO = DP + SNP + GATP + PPDS + TPVS + SPP + CIF
SCM = APO + SNC + Event Management + EWM. Cranesoft solutions offers best SCM training in Bangalore.
